

APRN Pharmacology Today

Optimal Treatment for Dyslipidemia

With dyslipidemia being a primary, major risk factor for atherosclerotic cardiovascular disease death in 2016, it's important to learn more about this condition. Are you ready to learn the latest on optimal pharmacological management for patients with dyslipidemia?

Discover available drug treatments for dyslipidemia, current clinical practice guidelines, standards of care, and therapeutic options to improve treatment. This interactive online course uses the latest evidence-based resources to help you select medications for the treatment of dyslipidemia, focusing on thorough reviews to help improve patient treatment plans. After taking this course, you will be able to:

- Describe risk factors and diagnostic criteria for dyslipidemia
- Review current literature and guideline recommendations for the treatment of dyslipidemia
- Compare and contrast the available pharmacologic treatments for dyslipidemia
- Formulate a treatment and monitoring plan for patients with dyslipidemia to decrease the risk of complications

Sign up now for this online course and take the first step toward safe prescribing practices!
